

The miracles of science™

**PROTECTS YOU FROM THE WEEDS YOU HAVE,  
AND THE WEEDS YOU DON'T HAVE YET.**

**DuPont™  
Canopy™ PRO**  
herbicide

**NEW DuPont™ Canopy™ PRO herbicide is a pre-emergence herbicide that delivers broad-spectrum and residual activity to help maximize early-season control of tough weeds.**

**Powerful weed control performance.**

Canopy™ PRO delivers powerful action against annual grass and broadleaf weeds.

**Broadleaf Weed Control**

- Carpetweed
- Cocklebur<sup>1</sup>
- Common chickweed
- Common ragweed
- Dandelion
- Green smartweed
- Jimsonweed<sup>1</sup>
- Lady's-thumb
- Lamb's-quarters
- Pigweed, redroot and prostrate
- Prickly mallow
- Russian thistle
- Shepherd's purse
- Velvetleaf
- Wild mustard
- Wild potato vine
- Yellow woodsorrel

<sup>1</sup> Large-seeded weeds, germinating deep in the soil, such as cocklebur and jimsonweed may not be fully controlled

**Annual Grasses (Partially Controlled)**

- Barnyard grass
- Cheatgrass
- Crabgrass
- Fall panicum
- Giant foxtail
- Green foxtail
- Johnson grass (seedling)
- Witchgrass
- Yellow foxtail

**Additional Hard-to-Kill Weeds<sup>1</sup>**

- Annual sow thistle
- Prickly lettuce
- Yellow nutsedge<sup>2</sup>

<sup>1</sup> Pre-plant burndown applications when tank-mixed with glyphosate / <sup>2</sup>Suppression

**Application information.**

- Convenient packaging – one case contains a 20 acre jug (288 grams) of Classic® Grande + 2 - 2.2kg jugs of a 75% DF metribuzin.
- Pre-emergence – apply Canopy™ PRO after planting but prior to crop emergence.
- Pre-plant burndown – apply Canopy™ PRO with a glyphosate of choice for burndown and residual control.

Apply up to 14 days before planting.

## A proactive approach to weed resistance.

- Two different modes of action (Group 2 and Group 5) help to delay and manage weed resistance.
- For no-till soybean applications, tank-mixing with a glyphosate product of choice delivers a third mode of action.

## Protect yield potential.

- Early pre-emergence weed removal keeps your fields clean through the critical early stages of growth.
- Managing weeds early helps your crop express its maximum yield potential.

## Canopy™ PRO fits your production system.

- Canopy™ PRO can be used pre-plant or pre-emergence in a variety of tillage situations including no-till, conservation tillage or conventional tillage.
- Tank-mix your preferred glyphosate brand for pre-plant burndown applications in no-till soybeans.
- IP or GT? Canopy™ PRO gives you significant flexibility to build a weed control program that suits your individual needs:
  - GT Soybeans – with the added power of metribuzin, Canopy™ PRO provides a solid base of early weed control to help keep your crop weed-free during the early critical trifoliolate stages. Follow up with an in-crop glyphosate before canopy closure for a complete program.
  - IP Soybeans – Canopy™ PRO should be tank-mixed with other pre-emergence herbicides to ensure a complete approach to weed control and resistance management. Follow up in-crop with DuPont™ Assure® II herbicide to manage volunteer corn and annual grasses.

## Canopy™ PRO provides broad-spectrum, early weed control.

Treated pre-emergence - Canopy™ PRO herbicide alone

Untreated
