

The miracles of science™

MORE FLEXIBILITY. MORE CONTROL. YOU'RE THE BOSS.

**DuPont™
Freestyle™**
herbicide

Introducing **NEW DuPont™ Freestyle™ herbicide**, a flexible solution for early season weed control in soybeans. Freestyle™ controls many grass and broadleaf weeds and integrates easily with your soybean production system.

Performance and flexibility

Freestyle™ makes early-season weed control in soybeans simple and effective. It provides enhanced residual control of grass and broadleaf weeds, even many of the most troublesome weeds, including Eastern black nightshade.

Freestyle™ also helps to defend against weed shifts in minimum or no-till systems. Tank-mixing Freestyle™ with your choice of glyphosate will help you manage hard-to-kill weeds such as dandelion, yellow nutsedge, prickly lettuce and annual sow thistle.

Fits any soybean production system

If you're growing GT soybeans.

Freestyle™ helps you time your in-crop glyphosate application for maximum effectiveness. By keeping your crop clean during the pre-emergence to 3rd trifoliolate stages, there's more flexibility in timing for your in-crop glyphosate application. You can manage your in-season workload better while minimizing weed competition, leading to higher yields for your crop and less stress for you.

If you're growing IP soybeans.

Freestyle™ brings added performance, delivering a broader spectrum of weeds controlled including many annual grasses, and some key broadleaf weeds including velvetleaf and nightshade.

A long-term approach to weed resistance in GT soybeans

Glyphosate-resistant weeds are a reality today, with three species already confirmed resistant in Eastern Canada. By contributing a second mode of action to your glyphosate-tolerant soybean production system, Freestyle™ helps you manage your crop for today and for the future.

Broad-spectrum and residual season-long weed control

Freestyle™ delivers broad-spectrum and residual weed control including many hard-to-kill weeds.

Weeds controlled		
<p>Broadleaf Weeds</p> <ul style="list-style-type: none"> • Dandelion • Lamb's-quarters • Redroot pigweed • Smartweed • Lady's-thumb • Wild mustard • Velvetleaf • Common ragweed • Wild buckwheat • Eastern black nightshade • Cocklebur¹ 	<p>Annual Grasses</p> <ul style="list-style-type: none"> • Green foxtail • Yellow foxtail • Barnyard grass • Old witchgrass • Proso millet¹ 	<p>Additional Hard-to-Kill Weeds¹</p> <ul style="list-style-type: none"> • Annual sow thistle • Prickly lettuce • Yellow nutsedge²
¹ Large-seeded weeds, germinating deep in the soil, such as cocklebur may not be fully controlled.	¹ Partial control	¹ Pre-plant burndown applications when tank-mixed with glyphosate / ² Suppression

Handling and application information

Handling and applying Freestyle™ is easy and convenient. Each compact 20-acre case of Freestyle™ contains a 20-acre jug of Classic® Grande and a 2.5 litre jug of DuPont™ Imazethapyr 240 SL herbicide.

GT soybeans: Apply Freestyle™ as a pre-plant or pre-emergence application in any tillage system. For no-till or minimum till systems where there are emerged weeds at application, tank-mix with a registered glyphosate product. Follow up with an in-crop glyphosate application.

IP soybeans: Apply Freestyle™ as a pre-plant or pre-emergence application in any tillage system. Tank-mixes with pre-emergence herbicides from alternate herbicide groups are recommended for the management of group 2 resistant weed biotypes. Follow up with DuPont™ Assure® II herbicide to manage volunteer corn and annual grasses.

Field applied with DuPont™ Freestyle™ herbicide. Location: Ormstown, Quebec, 2013.

Questions?

For more information, please contact your retailer, call your local DuPont rep or the DuPont™ FarmCare® Support Centre at 1-800-667-3925 or visit freestyle.dupont.ca

As with all crop protection products, read and follow label instructions carefully. All information effective December 2013.
