DuPont™ Kalrez® 0090
Provides Outstanding Resistance to Rapid Gas Decompression

Technical Information - Rev. 5, July 2019

Product Description
DuPont™ Kalrez® 0090 perfluoroelastomer parts deliver durable, reliable sealing solutions for applications requiring excellent rapid gas decompression (RGD) properties as well as high hardness, high modulus properties, and excellent extrusion resistance (even without backup rings). Potential oil and gas applications include downhole equipment such as drilling and completion tools, as well as industrial equipment including pumps, valves and compressors. Kalrez® 0090 has been certified by two independent laboratories to meet rigorous requirements for resistance to RGD.

In addition to demonstrated RGD resistance, DuPont™ Kalrez® 0090 seals provide superior performance in regard to chemical and temperature properties.

- Chemical resistance: Kalrez® 0090 is resistant to chemicals encountered in the oil and gas industry, including sour process streams containing H2S. (Reference NORSOK M-710 Rev 2 Sour Fluid aging resistance performed by MERL (UK).
- Broad temperature capability: Kalrez® 0090 retains good physical properties up to temperatures as high as 250 °C (482 °F) and down to –21 °C (–5.8 °F). Under pressurized conditions, in laboratory tests*, Kalrez® 0090 has demonstrated low temperature performance down to –40 °C (–40 °F).

2 ASTM D2240 (Pellet test specimens)
3 ASTM D412 (Dumbbell test specimens)
4 ASTM D395B, (Pellet test specimens)
5 ASTM D395B & D1414, (AS568 K214 O-ring test specimens)
6 DuPont proprietary test method; performance will vary with seal design and application specifics
7 DuPont proprietary test method (DSC midpoint)
8 ASTM D1329 (ISO 2781) (slab test specimens)
Product Testing Notes

- Every product delivery comes with a COA (Certificate of Analysis) that contains the information required as per ISO 23936-2.
- The tear strength result reported in is a “typical physical property.” This result is representative of this particular test, but may not be related to actual field performance. End use testing will be required to determine product suitability for use.
- High pressure gas permeation data is required for large components and depends on the part geometry. The data can be generated once testing conditions have been agreed with the customer.

Certifications
Compliant with ISO 23936-2
Tested by Materials Engineering Research Laboratory (MERL) against NORSOK M-710 rev.2 for both
- Annex B: Rapid Gas decompression, Kalrez® 0090 was given the highest rating, “0”, indicating “no internal cracks, holes or blisters of any size.” (O-ring size AS568-312) (See Table 2 conditions)
- Annex A: Sour gas chemical aging
- Required documentation of material properties is provided below in accordance to Table 1 of the ISO23936-3 standard

Certified as per TOTAL GS PVV 142
Tested by CETM (Technical Center for industry testing) against TOTAL GS PVV 142 Rapid Gas Decompression requirements
- Pass with no cracks, no blisters on CSD = 5.33 mm (O-ring size AS568-349) (See Table 2 conditions)
- Pass with no cracks, no blisters on CSD = 6.99 mm (O-ring size AS568-425) (See Table 2 conditions)

Highest NORSOK and TOTAL Rating Demonstrates Outstanding RGD Resistance of DuPont™ Kalrez® 0090

The information set forth herein is furnished free of charge, is based on technical data that DuPont believes to be reliable, and represents typical values that fall within the normal range of properties. This information relates only to the specific material designated and may not be valid for such material used in combination with other materials or in other processes. It is intended for use by persons having technical skill, at their own discretion and risk. This information should not be used to establish specification limits nor used alone as the basis of design. Handling precaution information is given with the understanding that those using it will satisfy themselves that their particular conditions of use present no health or safety hazards and comply with applicable law. Since conditions of product use and disposal are outside our control, we make no warranties, express or implied, and assume no liability in connection with any use of this information. As with any product, evaluation under end-use conditions prior to specification is essential. Nothing herein is to be taken as a license to operate or a recommendation to infringe on patents.

CAUTION: Do not use DuPont materials in medical applications involving implantation in the human body or contact with internal body fluids or tissues unless the material has been provided from DuPont under a written contract that is consistent with the DuPont policy regarding medical applications and expressly acknowledges the contemplated use. For further information, please contact your DuPont representative.

DuPont’s sole warranty is that our products will meet our standard sales specifications in effect at the time of shipment. Your exclusive remedy for breach of such warranty is limited to refund of purchase price or replacement of any product shown to be other than as warranted. TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, DUPONT SPECIFICALLY DISCLAIMS ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR NON-INFRINGEMENT. DUPONT DISCLAIMS LIABILITY FOR ANY SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

NORSOK M-710 (Rev. 2)

TEST CERTIFICATE

This document certifies that
Kalrez® 0090 – K312 “A” O-rings from
DuPont Performance Polymers
meet the requirements of
NORSOK M710 [Rev. 2, October 2001] in respect of rapid
gas decompression resistance in 10% carbon dioxide at
150 bar and 100°C

Test gas: 95/5 mol% CH4/CO2
Test temperature: 100°C
Test pressure: 150 bar
Decompression rate: 20 bar/minute

Passed by: Dr. Sabine March
Date of first issue: 15/10/2004
Date of last revision: 15/09/2012

TOTAL GS EP PVV 142 (Rev. 5)

TEST REPORT

Rapid Gas Decompression Test According to
Total GS EP PVV 142 rev. 5 Procedure

N: CETIM/MC0001 Date: 11 January 2012

Acclaim: CETIM, 2 CREMENES, 2 CREMENES, 2 CREMENES, 2 CREMENES
1386 LE GUAINIAC LAMENNE

5. Simulation of test

The tests were performed at the CETIM of Montpellier on November 2011, also at testing on the customer side according to requirements of clauses. The test procedure is TOTAL/GS EP PVV 142 rev.5 concerning O-rings used in material and equipment.

6. Component tested:

- Material:
- Nitrogen (N2)
- Pressure: 150 bar
- Temperature: 100°C
- Decompression rate: 20 bar/minute
- Duration of test: 24 hours

7. Test results:

- No leakage detected
- No changes in appearance
- No changes in dimensions

8. Certification:

- Certification number: CER-0001
- Certification body: CETIM
